LÊ THÚC THANH TÚ

SAP DEVELOPER

Ho Chi Minh city, Vietnam | lethucthanhtu@gmail.com | (+84) 098 432 67 42 | LinkedIn

PROFILE

SAP ABAP Developer with hands-on experience in building ALV reports, Smartforms, and Fiori applications. Familiar with integrating SAP modules (MM/SD) and developing OData services for modern UI applications. Passionate about both backend and frontend logic and enterprise system development, aiming to grow into a full-cycle SAP technical consultant.

PROFESSIONAL EXPERIENCE

SAP Developer, DXC Technology **Jan 2025 to Present**
Ho Chi Minh

SAP Developer Intern, FPT Software **Sept 2023 to Dec 2023**
Ho Chi Minh

KEY PROJECT EXPERIENCE

Internal Sales & Purchasing Process and Goods Movement Module System

Project description: Developed ALV reports and Smartforms for outbound delivery processes, including movement status management, goods issue/receipt postings, and billing exports. Integrated custom reports with standard SAP transactions (VL02N, MIGO).

Responsibilities

- Designed and developed ALV reports to streamline outbound delivery tracking, reducing manual processing effort.
- Integrated custom programs with VL02N and MIGO for real-time updates to delivery documents.
- Created Smartforms for generating and exporting billing documents in PDF format.
- Implemented OOABAP, BAPI, BAdI, BDC in development tasks.

3D Warehouse Virturalization SAP Fiori Applicaiton

Project description: 3D Warehouse Virturalization in Fiori UI5

Developed a 3D warehouse visualization application using SAP UI5 integrated with Three.js, enabling interactive cargo management and spatial navigation within warehouse environments.

Responsibilities

- Integrated Three.js for 3D visualization inside SAP UI5 views.
- Develop key features like add and remove cargo, storage in the warehouse, navigate, and highlight specific cargo
- Configured and deployed the application to SAP BTP Cloud Foundry environment.
- Managed destination and HTML5 repo configuration for app accessibility in Launchpad/Work Zone.

SAP External System Automation & Error Monitoring

Project description: Developed an automated monitoring solution in SAP to detect system errors and integrate with external systems for reporting and analysis.

Responsibilities:

- Designed and implemented a scheduled batch job to periodically scan SAP system logs and detect predefined error conditions.
- Developed an RFC-enabled function module to parse and collect error data (e.g., error ID, timestamp, and relevant details).
- Built an OData service to expose structured error data for external system consumption.
- Integrated SAP backend with external systems by transmitting error reports through OData endpoints.
- Ensured reliable and consistent data flow between SAP and external platforms for monitoring and alerting purposes.

Sale Data Management Fiori Application

Project description: Developed a SAP Fiori application with SAP UI5 and TypeScript. The app was connected to OData services, providing CRUD operations and data visualization through smart tables.

Responsibilities

- Designed and implemented the SAP Fiori UI5 application using TypeScript and MVC model.
- Integrated the app with OData services for backend communication.
- Developed Smart Table components with filtering and search functionality.
- Implemented full CRUD operations (create, read, update, delete).
- Ensured responsive design and performance optimization within the Fiori environment.

EDUCATION

FPT University
Bachelor of Information Technology, Ho Chi Minh city

CERTIFICATE

C_SIGDA - SAP Certified Associate - Process Data Analyst - SAP Signavio, SAP

TOEIC (total score: 835)

TECH SKILLS

SAP Technologies

- ABAP, OOABAP, BAPI, BAdI, BDC
- ALV, Report, Smartform

SAP UI / Integration

- SAP Fiori UI5, OData

Others

- Typescript, JavaScript
- NextJS, ReactJS
- MySQL, PostgreSQL, Supabase

LANGUAGES

English, Vietnamese

PERSONAL PROJECTS

SAP GUI IDE theme changer

Project description: Developed a customization tool to enhance SAP GUI code editor experience, improving developer usability and readability.

Outcome: *GitHub*

URL Shortener Webapp

Project description: Developed a full-stack URL shortener platform that allows users to create, manage, and analyze shortened links with advanced customization and tracking capabilities.

Responsibilities / Highlights:

- Designed and implemented URL shortening logic with support for custom aliases and secure access using password protection.
- Built RESTful APIs for link generation, redirection, and data retrieval.
- Implemented analytics features, including click tracking, device insights, and visualization through interactive charts.
- Developed link preview functionality for better integration when sharing across external platforms.
- Integrated Google Authentication for seamless user login and account management.
- Designed responsive UI supporting both dark and light themes across multiple devices.
- Managed deployment and ensured stable hosting for public access.

Outcome: *lttt.dev*

URL Shortener Browser Extension

Project description: Developed a browser extension to streamline the URL shortening process, enabling users to generate and copy shortened links instantly with a single click.

Responsibilities / Highlights:

- Built extension functionality to capture the current tab URL and generate shortened links via API integration.
- Implemented one-click copy-to-clipboard feature for improved user convenience and workflow efficiency.
- Designed user-friendly UI for fast interaction without leaving the current page.
- Ensured seamless communication between extension and backend services.

Outcome: *GitHub*
